

Welcome

In this guide you will learn how to customize some of the most important parts of the landing page. In order to customize our template and generate the appropriately sized images we recommend that you use Sketch. With Sketch you will be able to upload your own pictures to the mock up, size them to your liking and then export them. You can find the mockup sketch file on the main zip you downloaded from Envato Market.

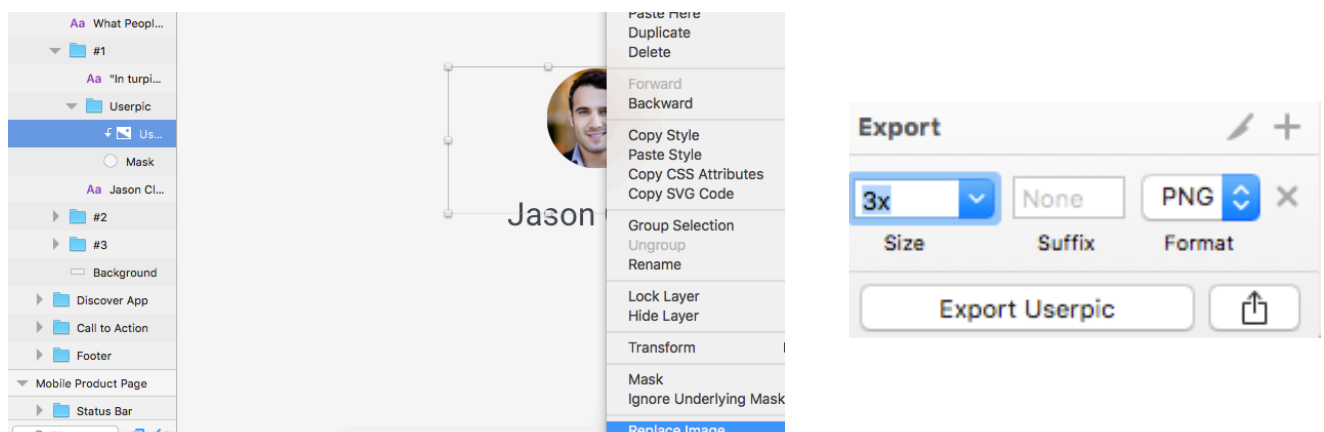

If you don't have Sketch, you can download it from their website and use it for free for 90 days (<https://www.sketchapp.com>). If you still can't use it, you can just open up the placeholders with a photo editing software and adjust their size directly.

Placeholders Recommended Sizes

- Hero Image – 1440x720px
- Tabs Blocks – 1080x780px
- Person Photos – 168x168px
- App Photo – 1254x1401px

Updating the Mockup on Sketch and Exporting

1. Double click on the picture that you want to replace and right-click on it;
2. On the menu that opens up click on "Replace Image";
3. Resize the image (not the frame) and re-position it to your liking;
4. On the right sidebar click on "Export" and export the image at 3x the size;

On the index.html file, that contains all the structure and content of the landing page you will find the code of the menu on line 55. Each of the areas of the landing page are divided into the following sections:

- #tabs – line 121
- #areas_of_expertise – line 316
- #how_it_works – line 366
- #discover_our_app – line 404
- #testimonials – line 443
- #contact – line 482

If you update the id's of the sections make sure you update them on the menu as well, so the anchoring works properly. If you would like to disable the anchoring and link to external pages open up the file js/script.js and delete lines 21 to 24.

Tabs

The tabs work similarly to the menu anchors. The landing page has a list of links that contain the id's of each of the tabs. You can add as many tabs as you need, just make sure you add both the new tab link and tab area.

List Link (line 124 to 130) - `Tab Title`

Tab Content (line 134 to 330) - `<div id="tab-4"></div>`

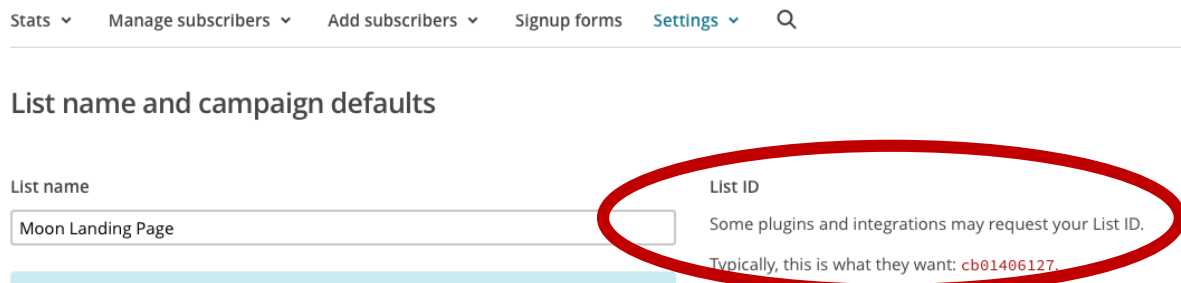

Contact Form

The contact form is processed using PHP. In order for it work you need to have the landing page hosted on a server with PHP installed and the mail function enabled. If you don't know if PHP is enabled or if the emails aren't being sent we recommend that you contact your hosting company.

To update the email to where the emails are sent open up the file `contact_form.php` that's on the root of the landing page folder and on line 17 replace the email example@gmail.com with your own.

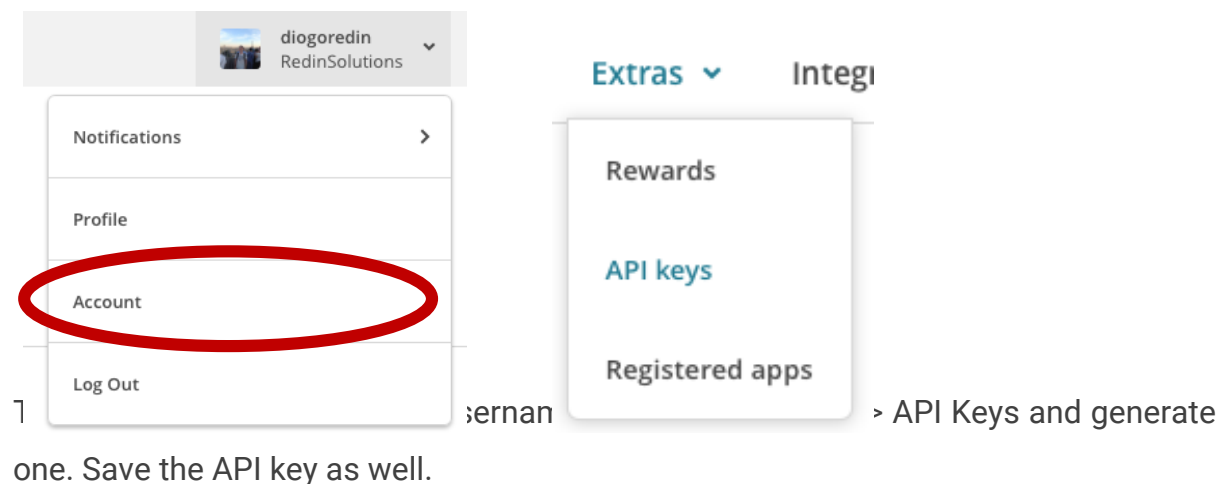

Configuring Mailchimp

In order to get mailchimp subscription form working you need to have an email list configured and an mailchimp API key active.

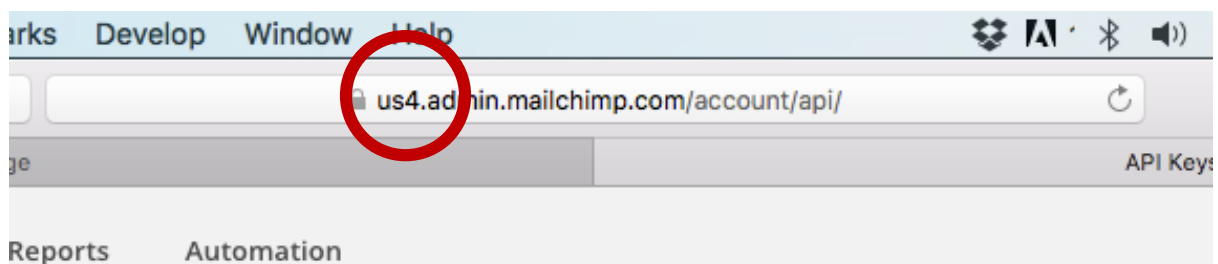

The screenshot shows the Mailchimp 'Settings' page. The 'List name and campaign defaults' section is visible. The 'List name' field contains 'Moon Landing Page'. The 'List ID' field is empty and circled in red. Below the 'List ID' field, there is a note: 'Some plugins and integrations may request your List ID. Typically, this is what they want: **cb01406127**'.

To create a list go to mailchimp.com, login and click on the menu item Lists. Then click on top-right button "Create List", complete all the details and go to List Settings > List names and defaults page and grab the list ID

The screenshot shows the Mailchimp account menu. The 'Account' option is circled in red. To the right, the 'Extras' dropdown menu is open, showing options: 'Rewards', 'API keys', and 'Registered apps'. The 'API keys' option is highlighted in blue.

Additionally you need to know the server Mailchimp is using to host your list. To know this, look at the address bar when you are inside your Mailchimp account. The url should be usx, being x a number, followed by admin.mailchimp.com.

With all the details you got before, now open up the **mailchimp.php** file that's on the root of the landing page folder and fill in the details from line 13 to 16.

- Line 13 – The API key you generated;
- Line 14 – The datacenter where your list is hosted (us4 for example);
- Line 15 – The list ID;
- Line 16 – Your mailchimp username;

Support and Further Information

The most important topics should have been covered by this guide but if you need further help editing and adding your content don't hesitate to email us at contact@diogoredin.com.

If you are having issues with the contact form or the subscribe form feel free to email us access to your hosting account as well so we can help you further.
